

Kleen Aire™ Baghouse

The Kleen Aire™ Baghouse is the first system to use pleated polyester cartridge filters in place of the traditional bag/cage arrangement. The pleated design of the cartridge filters provides more filtering surface area, greatly improving airflow and the ability to capture large quantities of fine airborne particulate.

Benefits:

- Optimal performance with minimal maintenance
- Up to 100,000 cfm+ capacity in a portable baghouse
- Pleated filter design provides more filtering surface area
- Low compressed air requirements - 60 to 70 psi for jet pulse cleaning
- Low maintenance conveyor system for discharging dust
- Easy access to filters and blow pipes
- Quiet, long lasting and virtually maintenance free

Features:

- Polyester cartridge filters OR traditional bags
- Heavy duty drag chain conveyor mounted on rails for discharging dust
- No drag flight contact with baghouse floor
- Low pressure pulse jet cleaning system
- Easy access doors for all maintenance
- Pitched top to prevent rain water from pooling
- Stationary, portable and skid-mount options
